## **Circuits of the Mind** Leslie G. Valiant

In this groundbreaking work, computer scientist Leslie G. Valiant details a promising new computational approach to studying the intricate workings of the human brain. Focusing on the brain's enigmatic ability to access a massive store of accumulated information very quickly during reasoning processes, the author asks how such feats are possible given the extreme constraints imposed by the brain's finite number of neurons, their limited speed of communication, and their restricted interconnectivity. Valiant proposes a "neuroidal model" that serves as a vehicle to explore these fascinating questions.

While embracing the now classic theories of McCulloch and Pitts, the neuroidal model also accommodates state information in the neurons, more flexible timing mechanisms, a variety of assumptions about interconnectivity, and the possibility that different areas perform different functions. Programmable so that a wide range of algorithmic theories can be described and evaluated, the model provides a concrete computational language and a unified framework in which diverse cognitive phenomena--such as memory, learning, and reasoning--can be systematically and concurrently analyzed.

Included in this volume is a new preface that highlights some remarkable points of agreement between the neuroidal model and findings in neurobiology made since that model's original publication. Experiments have produced strong evidence for the theory's predictions about the existence of strong synapses in cortex and about the use of precise timing mechanisms within and between neurons. The theory also provides a quantitative explanation of how randomly placed neurons can be harnessed as resources for general purpose learning and memory--and is therefore synergistic with the striking recent discovery of neurogenesis in cortex.

Requiring no specialized knowledge, *Circuits of the Mind*, masterfully offers an exciting new approach to brain science for students and researchers in computer science, neurobiology, neuroscience, artificial intelligence, and cognitive science.

### **From reader reviews:**

#### **Robert Johnson:**

Information is provisions for folks to get better life, information currently can get by anyone from everywhere. The information can be a knowledge or any news even a concern. What people must be consider whenever those information which is inside former life are hard to be find than now could be taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you obtain the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All those possibilities will not happen with you if you take Circuits of the Mind as the daily resource information.

#### **Brian Street:**

Are you kind of hectic person, only have 10 or even 15 minute in your morning to upgrading your mind ability or thinking skill actually analytical thinking? Then you are having problem with the book as compared to can satisfy your limited time to read it because this all time you only find publication that need more time to be study. Circuits of the Mind can be your answer because it can be read by you who have those short time problems.

#### **Alice Black:**

As we know that book is very important thing to add our information for everything. By a reserve we can know everything you want. A book is a set of written, printed, illustrated or maybe blank sheet. Every year ended up being exactly added. This reserve Circuits of the Mind was filled regarding science. Spend your time to add your knowledge about your science competence. Some people has distinct feel when they reading the book. If you know how big advantage of a book, you can experience enjoy to read a reserve. In the modern era like right now, many ways to get book which you wanted.

#### **Catharine Rosol:**

That guide can make you to feel relax. This specific book Circuits of the Mind was vibrant and of course has pictures on there. As we know that book Circuits of the Mind has many kinds or type. Start from kids until adolescents. For example Naruto or Investigation company Conan you can read and think that you are the character on there. So , not at all of book are make you bored, any it makes you feel happy, fun and unwind. Try to choose the best book for you and try to like reading this.
